

NEW YORK NON-NATIVE PLANT INVASIVENESS RANKING FORM

Scientific name: Lysimachia vulgaris USDA Plants Code: LYVU
 Common names: Garden loosestrife, garden yellow loostrife
 Native distribution: Eurasia
 Date assessed: April 14, 2008, October 12, 2008; edited 24 March 2009
 Assessors: Steve Glenn, Gerry Moore
 Reviewers: LIISMA SRC
 Date Approved: 10-22-2008 Form version date: 22 October 2008

New York Invasiveness Rank: High (Relative Maximum Score 70.00-80.00)

Distribution and Invasiveness Rank (<i>Obtain from PRISM invasiveness ranking form</i>)			
	Status of this species in each PRISM:	Current Distribution	PRISM Invasiveness Rank
1	Adirondack Park Invasive Program	Not Assessed	Not Assessed
2	Capital/Mohawk	Not Assessed	Not Assessed
3	Catskill Regional Invasive Species Partnership	Not Assessed	Not Assessed
4	Finger Lakes	Not Assessed	Not Assessed
5	Long Island Invasive Species Management Area	Not Present	Moderate
6	Lower Hudson	Not Assessed	Not Assessed
7	Saint Lawrence/Eastern Lake Ontario	Not Assessed	Not Assessed
8	Western New York	Not Assessed	Not Assessed

Invasiveness Ranking Summary (see details under appropriate sub-section)		Total (Total Answered*) Possible	Total
1	Ecological impact	40 (<u>20</u>)	10
2	Biological characteristic and dispersal ability	25 (<u>22</u>)	14
3	Ecological amplitude and distribution	25 (<u>25</u>)	23
4	Difficulty of control	10 (<u>10</u>)	9
	Outcome score	100 (<u>77</u>) ^b	56 ^a
	Relative maximum score †		72.73
	New York Invasiveness Rank §	High (Relative Maximum Score 70.00-80.00)	

* For questions answered "unknown" do not include point value in "Total Answered Points Possible." If "Total Answered Points Possible" is less than 70.00 points, then the overall invasive rank should be listed as "Unknown."

† Calculated as 100(a/b) to two decimal places.

§ Very High >80.00; High 70.00-80.00; Moderate 50.00-69.99; Low 40.00-49.99; Insignificant <40.00

A. DISTRIBUTION (KNOWN/POTENTIAL): Summarized from individual PRISM forms

A1.1. Has this species been documented to persist without cultivation in NY? (reliable source; voucher not required)		
<input checked="" type="checkbox"/>	Yes – continue to A1.2	
<input type="checkbox"/>	No – continue to A2.1	
A1.2. In which PRISMs is it known (see inset map)?		
<input checked="" type="checkbox"/>	Adirondack Park Invasive Program	
<input checked="" type="checkbox"/>	Capital/Mohawk	
<input checked="" type="checkbox"/>	Catskill Regional Invasive Species Partnership	
<input checked="" type="checkbox"/>	Finger Lakes	
<input type="checkbox"/>	Long Island Invasive Species Management Area	
<input checked="" type="checkbox"/>	Lower Hudson	
<input checked="" type="checkbox"/>	Saint Lawrence/Eastern Lake Ontario	
<input checked="" type="checkbox"/>	Western New York	

NEW YORK NON-NATIVE PLANT INVASIVENESS RANKING FORM

Documentation:

Sources of information:

Weldy & Werier, 2005; Brooklyn Botanic Garden, 2008.

A2.1. What is the likelihood that this species will occur and persist outside of cultivation given the climate in the following PRISMs? (obtain from PRISM invasiveness ranking form)

Not Assessed	Adirondack Park Invasive Program
Not Assessed	Capital/Mohawk
Not Assessed	Catskill Regional Invasive Species Partnership
Not Assessed	Finger Lakes
Moderately Likely	Long Island Invasive Species Management Area
Not Assessed	Lower Hudson
Not Assessed	Saint Lawrence/Eastern Lake Ontario
Not Assessed	Western New York

Documentation:

Sources of information (e.g.: distribution models, literature, expert opinions):

Weldy & Werier, 2005; Brooklyn Botanic Garden, 2008.

If the species does not occur and is not likely to occur with any of the PRISMs, then stop here as there is no need to assess the species.

A2.2. What is the current distribution of the species in each PRISM? (obtain rank from PRISM invasiveness ranking forms)

	Distribution
Adirondack Park Invasive Program	Not Assessed
Capital/Mohawk	Not Assessed
Catskill Regional Invasive Species Partnership	Not Assessed
Finger Lakes	Not Assessed
Long Island Invasive Species Management Area	Not Present
Lower Hudson	Not Assessed
Saint Lawrence/Eastern Lake Ontario	Not Assessed
Western New York	Not Assessed

Documentation:

Sources of information:

Weldy & Werier, 2005; Brooklyn Botanic Garden, 2008.

A2.3. Describe the potential or known suitable habitats within New York. Natural habitats include all habitats not under active human management. Managed habitats are indicated with an asterisk.

<p>Aquatic Habitats</p> <p><input type="checkbox"/> Salt/brackish waters</p> <p><input type="checkbox"/> Freshwater tidal</p> <p><input checked="" type="checkbox"/> Rivers/streams</p> <p><input checked="" type="checkbox"/> Natural lakes and ponds</p> <p><input type="checkbox"/> Vernal pools</p> <p><input checked="" type="checkbox"/> Reservoirs/impoundments*</p>	<p>Wetland Habitats</p> <p><input checked="" type="checkbox"/> Salt/brackish marshes</p> <p><input checked="" type="checkbox"/> Freshwater marshes</p> <p><input type="checkbox"/> Peatlands</p> <p><input type="checkbox"/> Shrub swamps</p> <p><input checked="" type="checkbox"/> Forested wetlands/riparian</p> <p><input type="checkbox"/> Ditches*</p> <p><input type="checkbox"/> Beaches and/or coastal dunes</p>	<p>Upland Habitats</p> <p><input type="checkbox"/> Cultivated*</p> <p><input type="checkbox"/> Grasslands/old fields</p> <p><input type="checkbox"/> Shrublands</p> <p><input type="checkbox"/> Forests/woodlands</p> <p><input type="checkbox"/> Alpine</p> <p><input checked="" type="checkbox"/> Roadsides*</p>

**NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM**

B. INVASIVENESS RANKING

1. ECOLOGICAL IMPACT

1.1. Impact on Natural Ecosystem Processes and System-Wide Parameters (e.g. fire regime, geomorphological changes (erosion, sedimentation rates), hydrologic regime, nutrient and mineral dynamics, light availability, salinity, pH)

- A. No perceivable impact on ecosystem processes based on research studies, or the absence of impact information if a species is widespread (>10 occurrences in minimally managed areas), has been well-studied (>10 reports/publications), and has been present in the northeast for >100 years. 0
- B. Influences ecosystem processes to a minor degree (e.g., has a perceivable but mild influence on soil nutrient availability) 3
- C. Significant alteration of ecosystem processes (e.g., increases sedimentation rates along streams or coastlines, reduces open water that are important to waterfowl) 7
- D. Major, possibly irreversible, alteration or disruption of ecosystem processes (e.g., the species alters geomorphology and/or hydrology, affects fire frequency, alters soil pH, or fixes substantial levels of nitrogen in the soil making soil unlikely to support certain native plants or more likely to favor non-native species) 10
- U. Unknown

Score

U

Documentation:
 Identify ecosystem processes impacted (or if applicable, justify choosing answer A in the absence of impact information)
 One study shows the species increases the redox potential in surrounding soil. However, the actual impacts of this on the ecosystem not investigated..
Sources of information:
 Justin & Armstrong, 1987

1.2. Impact on Natural Community Structure

- A. No perceived impact; establishes in an existing layer without influencing its structure 0
- B. Influences structure in one layer (e.g., changes the density of one layer) 3
- C. Significant impact in at least one layer (e.g., creation of a new layer or elimination of an existing layer) 7
- D. Major alteration of structure (e.g., covers canopy, eradicating most or all layers below) 10
- U. Unknown

Score

3

Documentation:
 Identify type of impact or alteration:
 Can significantly increase the density of its layer; evidence of creation of a new layer or elimination of a layer are lacking.
Sources of information:
 Mehrhoff et al., 2004.

1.3. Impact on Natural Community Composition

- A. No perceived impact; causes no apparent change in native populations 0
- B. Influences community composition (e.g., reduces the number of individuals in one or more native species in the community) 3
- C. Significantly alters community composition (e.g., produces a significant reduction in the population size of one or more native species in the community) 7
- D. Causes major alteration in community composition (e.g., results in the extirpation of one or several native species, reducing biodiversity or change the community composition towards species exotic to the natural community) 10

**NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM**

U. Unknown

Score

7

Documentation:

Identify type of impact or alteration:

Can dominate areas causing significant reduction in populations of native species; evidence lacking that it causes extirpation of native species. Mehrhoff et al. (2003): "Lysimachia vulgaris presents a similar threat as the serious invasive Lythrum salicaria (purple loosestrife). In Washington state it has been reported as possibly outcompeting Lythrum salicaria in wetland habitats. The rhizomes spread readily. Though its populations have not yet reached the numbers of Lythrum salicaria populations, it has the potential to do so." In NY it has escaped cultivation but so far is no known to have established large infestations (a few plants seen in Plattsburg on cobble shore of Lake Champlain).

Sources of information:

Mehrhoff, 2003; author's (Moore's) personal observations; (S.Young pers. comm). .

1.4. Impact on other species or species groups (cumulative impact of this species on the animals, fungi, microbes, and other organisms in the community it invades.

Examples include reduction in nesting/foraging sites; reduction in habitat connectivity; injurious components such as spines, thorns, burrs, toxins; suppresses soil/sediment microflora; interferes with native pollinators and/or pollination of a native species; hybridizes with a native species; hosts a non-native disease which impacts a native species)

- | | |
|---|----|
| A. Negligible perceived impact | 0 |
| B. Minor impact | 3 |
| C. Moderate impact | 7 |
| D. Severe impact on other species or species groups | 10 |
| U. Unknown | |

Score

U

Documentation:

Identify type of impact or alteration:

Studies on impacts on other species not performed. Studies needed on whether non-native Lysimachias (e.g., L. clethroides, L. nummularia, L. punctata, L. vulgaris) are interfering with the pollination of native Lyimachia species.

2. BIOLOGICAL CHARACTERISTICS AND DISPERSAL ABILITY

2.1. Mode and rate of reproduction (provisional thresholds, more investigation needed)

- | | |
|--|---|
| A. No reproduction by seeds or vegetative propagules (i.e. plant sterile with no sexual or asexual reproduction). | 0 |
| B. Limited reproduction (fewer than 10 viable seeds per plant AND no vegetative reproduction; if viability is not known, then maximum seed production is less than 100 seeds per plant and no vegetative reproduction) | 1 |
| C. Moderate reproduction (fewer than 100 viable seeds per plant - if viability is not known, then maximum seed production is less than 1000 seeds per plant - OR limited successful vegetative spread documented) | 2 |
| D. Abundant reproduction with vegetative asexual spread documented as one of the plants prime reproductive means OR more than 100 viable seeds per plant (if viability is not known, then maximum seed production reported to be greater than 1000 seeds per plant.) | 4 |
| U. Unknown | |
-

**NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM**

Score 4

Documentation:

Describe key reproductive characteristics (including seeds per plant):
Limited seed production but abundant vegetative asexual spread.

Sources of information:

Stocky & Hunt, 1994; Mehrhoff, 2003; Messick & Kerr, 2007; Washington State Department of Ecology, 2008.

2.2. Innate potential for long-distance dispersal (e.g. bird dispersal, sticks to animal hair, buoyant fruits, pappus for wind-dispersal)

- | | | |
|----|--|---|
| A. | Does not occur (no long-distance dispersal mechanisms) | 0 |
| B. | Infrequent or inefficient long-distance dispersal (occurs occasionally despite lack of adaptations) | 1 |
| C. | Moderate opportunities for long-distance dispersal (adaptations exist for long-distance dispersal, but studies report that 95% of seeds land within 100 meters of the parent plant) | 2 |
| D. | Numerous opportunities for long-distance dispersal (adaptations exist for long-distance dispersal and evidence that many seeds disperse greater than 100 meters from the parent plant) | 4 |
| U. | Unknown | |

Score 2

Documentation:

Identify dispersal mechanisms:

Seeds are dispersed by water; Mehrhoff et al. (2003) reported that the primary mode of dispersal is by the rhizomes but data are not provided on how this dispersal by rhizomes is effected.

Sources of information:

Stocky & Hunt, 1994; Mehrhoff, 2003.

2.3. Potential to be spread by human activities (both directly and indirectly – possible mechanisms include: commercial sales, use as forage/revegetation, spread along highways, transport on boats, contaminated compost, land and vegetation management equipment such as mowers and excavators, etc.)

- | | | |
|----|---|---|
| A. | Does not occur | 0 |
| B. | Low (human dispersal to new areas occurs almost exclusively by direct means and is infrequent or inefficient) | 1 |
| C. | Moderate (human dispersal to new areas occurs by direct and indirect means to a moderate extent) | 2 |
| D. | High (opportunities for human dispersal to new areas by direct and indirect means are numerous, frequent, and successful) | 3 |
| U. | Unknown | |

Score 2

Documentation:

Identify dispersal mechanisms:

Possibly sold as an ornamental plant; might be confused with *L. punctata*, which is widely sold. Rhizomes could be inadvertently distributed by boats, etc., although plant is generally rooted.

Sources of information:

Brocket & Cooperrider, 1983, Mehrhoff et al., 2003.

2.4. Characteristics that increase competitive advantage, such as shade tolerance, ability to grow on infertile soils, perennial habit, fast growth, nitrogen fixation, allelopathy, etc.

- | | | |
|----|---|---|
| A. | Possesses no characteristics that increase competitive advantage | 0 |
| B. | Possesses one characteristic that increases competitive advantage | 3 |

**NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM**

- C. Possesses two or more characteristics that increase competitive advantage 6
 U. Unknown

Score

Documentation:
 Evidence of competitive ability:
 Perennial. It is able to tolerate soils which are saturated for most of the year as aerenchyma tissue is produced in the stems. There are suggestions that this species is even out-competing *Lythrum salicaria* in Washington state. A European study suggests this species has difficulty thriving in high grass (*Phalaris*) habitats. Another European study found a relative growth rate slower than most species tested.
 Sources of information:
 Witte, 1906; Lambert, 1951; Justin & Armstrong, 1987; Stockey & Hunt, 1994; Roth et al., 1999; Messick & Kerr, 2007; Washington State Department of Ecology, 2008.

2.5. Growth vigor

- A. Does not form thickets or have a climbing or smothering growth habit 0
 B. Has climbing or smothering growth habit, forms a dense layer above shorter vegetation, forms dense thickets, or forms a dense floating mat in aquatic systems where it smothers other vegetation or organisms 2
 U. Unknown

Score

Documentation:
 Describe growth form:
 Not reported to form thickets or a smothering habit.
 Sources of information:
 Mehrhoff et al., 2003; Washington State Department of Ecology, 2008.

2.6. Germination/Regeneration

- A. Requires open soil or water and disturbance for seed germination, or regeneration from vegetative propagules. 0
 B. Can germinate/regenerate in vegetated areas but in a narrow range or in special conditions 2
 C. Can germinate/regenerate in existing vegetation in a wide range of conditions 3
 U. Unknown (No studies have been completed)

Score

Documentation:
 Describe germination requirements:
 One European restoration field test found germination rates of up to 30%. A lab test found germination rates after 30 days at 87%. Studies lacking on requirements needed in the field..
 Sources of information:
 Hunt, 1994; Roth et al., 1999.

2.7. Other species in the genus invasive in New York or elsewhere

- A. No 0
 B. Yes 3
 U. Unknown

Score

Documentation:
 Species:
Lysimachia nummularia.

Total Possible
 Section Two Total

3. ECOLOGICAL AMPLITUDE AND DISTRIBUTION

**NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM**

3.1. Density of stands in natural areas in the northeastern USA and eastern Canada (use same definition as Gleason & Cronquist which is: “The part of the United States covered extends from the Atlantic Ocean west to the western boundaries of Minnesota, Iowa, northern Missouri, and southern Illinois, south to the southern boundaries of Virginia, Kentucky, and Illinois, and south to the Missouri River in Missouri. In Canada the area covered includes Nova Scotia, Prince Edward Island, New Brunswick, and parts of Quebec and Ontario lying south of the 47th parallel of latitude”)

- A. No large stands (no areas greater than 1/4 acre or 1000 square meters) 0
- B. Large dense stands present in areas with numerous invasive species already present or disturbed landscapes 2
- C. Large dense stands present in areas with few other invasive species present (i.e. ability to invade relatively pristine natural areas) 4
- U. Unknown

Score 4

Documentation:

Identify reason for selection, or evidence of weedy history:
Species reported to occur in natural habitats with few other non-native invasive species present.

Sources of information:

Mehrhoff et al, 2003; author's (Moore's) personal observations in New England.

3.2. Number of habitats the species may invade

- A. Not known to invade any natural habitats given at A2.3 0
- B. Known to occur in two or more of the habitats given at A2.3, with at least one a natural habitat. 1
- C. Known to occur in three or more of the habitats given at A2.3, with at least two a natural habitat. 2
- D. Known to occur in four or more of the habitats given at A2.3, with at least three a natural habitat. 4
- E. Known to occur in more than four of the habitats given at A2.3, with at least four a natural habitat. 6
- U. Unknown

Score 6

Documentation:

Identify type of habitats where it occurs and degree/type of impacts:
See A2.3.

Sources of information:

Lambert, 1951; Brockett, & Cooperrider, 1983; Cusick, 1986; Justin & Armstrong, 1987; Roth et al., 1999; Mehrhoff, 2004; Messick & Kerr, 2007.

3.3. Role of disturbance in establishment

- A. Requires anthropogenic disturbances to establish. 0
- B. May occasionally establish in undisturbed areas but can readily establish in areas with natural or anthropogenic disturbances. 2
- C. Can establish independent of any known natural or anthropogenic disturbances. 4
- U. Unknown

Score 2

Documentation:

Identify type of disturbance:
Usually seen in areas with natural or anthropogenic disturbance.

Sources of information:

Mehrhoff et al., 2003; author's (Moore's) personal observations in New England.

NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM

3.4. Climate in native range

- A. Native range does not include climates similar to New York 0
- B. Native range possibly includes climates similar to at least part of New York. 1
- C. Native range includes climates similar to those in New York 3
- U. Unknown

Score 3

Documentation:
Describe what part of the native range is similar in climate to New York:
Europe and temperate Asia.
Sources of information:
Mehrhoff et al., 2003; Brooklyn Botanic Garden 2008.

3.5. Current introduced distribution in the northeastern USA and eastern Canada (see question 3.1 for definition of geographic scope)

- A. Not known from the northeastern US and adjacent Canada 0
- B. Present as a non-native in one northeastern USA state and/or eastern Canadian province. 1
- C. Present as a non-native in 2 or 3 northeastern USA states and/or eastern Canadian provinces. 2
- D. Present as a non-native in 4–8 northeastern USA states and/or eastern Canadian provinces, and/or categorized as a problem weed (e.g., “Noxious” or “Invasive”) in 1 northeastern state or eastern Canadian province. 3
- E. Present as a non-native in >8 northeastern USA states and/or eastern Canadian provinces. and/or categorized as a problem weed (e.g., “Noxious” or “Invasive”) in 2 northeastern states or eastern Canadian provinces. 4
- U. Unknown

Score 4

Documentation:
Identify states and provinces invaded:
Reported in all northeastern states except DE and VA. Reported in all northeastern Canadian provinces.
Sources of information: See known introduced range in plants.usda.gov, and update with information from states and Canadian provinces.
U.S.D.A., 2008.

3.6. Current introduced distribution of the species in natural areas in the eight New York State PRISMs (Partnerships for Regional Invasive Species Management)

- A. Present in none of the PRISMs 0
- B. Present in 1 PRISM 1
- C. Present in 2 PRISMs 2
- D. Present in 3 PRISMs 3
- E. Present in more than 3 PRISMs or on the Federal noxious weed lists 4
- U. Unknown

Score 4

Documentation:
Describe distribution:
See A1.1.
Sources of information:
Weldy & Werier, 2005; Brooklyn Botanic Garden, 2008.

Total Possible 25

**NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM**

Section Three Total 23

4. DIFFICULTY OF CONTROL

4.1. Seed banks

- A. Seeds (or vegetative propagules) remain viable in soil for less than 1 year, or does not make viable seeds or persistent propagules. 0
- B. Seeds (or vegetative propagules) remain viable in soil for at least 1 to 10 years 2
- C. Seeds (or vegetative propagules) remain viable in soil for more than 10 years 3
- U. Unknown

Score 3

Documentation:

Identify longevity of seed bank:
One European study found viable seeds in seed bank after 20 years- up to 22 seeds per square meter.
Sources of information:
Falinska, 1999

4.2. Vegetative regeneration

- A. No regrowth following removal of aboveground growth 0
- B. Regrowth from ground-level meristems 1
- C. Regrowth from extensive underground system 2
- D. Any plant part is a viable propagule 3
- U. Unknown

Score 2

Documentation:

Describe vegetative response:
Extensive underground rhizomatous system.
Sources of information:
Stockey & Hunt, 1994; Mehrhoff, 2004; Messick & Kerr, 2007; Washington State Department of Ecology, 2008

4.3. Level of effort required

- A. Management is not required: e.g., species does not persist without repeated anthropogenic disturbance. 0
- B. Management is relatively easy and inexpensive: e.g. 10 or fewer person-hours of manual effort (pulling, cutting and/or digging) can eradicate a 1 acre infestation in 1 year (infestation averages 50% cover or 1 plant/100 ft²). 2
- C. Management requires a major short-term investment: e.g. 100 or fewer person-hours/year of manual effort, or up to 10 person-hours/year using mechanical equipment (chain saws, mowers, etc.) for 2-5 years to suppress a 1 acre infestation. Eradication is difficult, but possible (infestation as above). 3
- D. Management requires a major investment: e.g. more than 100 person-hours/year of manual effort, or more than 10 person hours/year using mechanical equipment, or the use of herbicide, grazing animals, fire, etc. for more than 5 years to suppress a 1 acre infestation. Eradication may be impossible (infestation as above). 4
- U. Unknown

Score 4

Documentation:

Identify types of control methods and time-term required:
Herbicide and other methods are currently under investigation. Washington State Department of Ecology (2008): "Control of this species will be complicated by two factors: 1) the species is a rhizomatous (stoloniferous) perennial, and 2) it inhabits environmentally sensitive wetland sites. Therefore, from an economic and environmental perspective, it is

**NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM**

advisable to prevent the expansion of garden loosestrife in the state. " The long-lived seed bank will also make control difficult.

Mehrhoff et al., 2003; Messick & Kerr, 2007; Washington State Department of Ecology, 2008.

Total Possible	10
Section Four Total	9

Total for 4 sections Possible	77
Total for 4 sections	56

C. STATUS OF CULTIVARS AND HYBRIDS:

At the present time (May 2008) there is no protocol or criteria for assessing the invasiveness of cultivars independent of the species to which they belong. Such a protocol is needed, and individuals with the appropriate expertise should address this issue in the future. Such a protocol will likely require data on cultivar fertility and identification in both experimental and natural settings.

Hybrids (crosses between different parent species) should be assessed individually and separately from the parent species wherever taxonomically possible, since their invasiveness may differ from that of the parent species. An exception should be made if the taxonomy of the species and hybrids are uncertain, and species and hybrids can not be clearly distinguished in the field. In such cases it is not feasible to distinguish species and hybrids, and they can only be assessed as a single unit.

Some cultivars of the species known to be available:

Acknowledgments: The NY form incorporates components and approaches used in several other systems, cited in the references below. Valuable contributions by members of the Long Island Invasive Species Management Area's Scientific Review Committee were incorporated in revisions of this form. Original members of the LIISMA SRC included representatives of the Brooklyn Botanic Garden; The Nature Conservancy; New York Natural Heritage Program, New York Sea Grant; New York State Office of Parks, Recreation and Historic Preservation; National Park Service; Brookhaven National Laboratory; New York State Department of Environmental Conservation Region 1; Cornell Cooperative Extension of Suffolk/Nassau Counties; Long Island Nursery and Landscape Association; Long Island Farm Bureau; SUNY Farmingdale Ornamental Horticulture Department; Queens College Biology Department; Long Island Botanical Society; Long Island Weed Information Management System database manager; Suffolk County Department of Parks, Recreation and Conservation; Nassau County Department of Parks, Recreation and Museums; Suffolk County Soil & Water Conservation District.
